

SCC-MPPT Solar Charge Controller

Quick Guide

SCC-300MPPT

**SCC-600MPPT
SCC-850MPPT**

1. Introduction

SCC-MPPT solar charge controller uses PWM-based DSP controller to keep the batteries regulated and prevent batteries from overcharging and discharging. Applying intelligent MPPT algorithm, it allows SCC-MPPT solar charge controller to extract maximum power from solar arrays by finding the maximum power point of the array.

The solar charge controller facilitates a standalone energy system. Typical applications are listed below:

- Mobile applications such as moving van, lodge, log cabin, or night market.
- Lighting applications such as street lights, road lights, or garage lights.
- Remote village with power shortage

Product Overview

- 1 Power switch
- 2 Solar energy status indicator (Blue LED)
- 3 Charging status indicator (Green LED)
- 4 Site wiring fault indicator (Red/Orange/Yellow LED)
- 5 LCD display (see Operation Section for the details)
- 6 Terminal block for solar panel connection
- 7 Terminal block for battery connection
- 8 Terminal block for load connection

2. Installation

Inspection

Remove the unit from the shipping package and inspect it for damage that may occur during transportation. Notify the carrier and place of purchase if any damage is found.

Installation Note

- Read all the installation section before beginning installation
- **CAUTION!** Be careful to reduce the risk of dropping a metal tool on the batteries. It could spark or short circuit the batteries and could cause an explosion.
- **CAUTION!** Remove personal metal items such as rings, bracelets, necklaces, and watches when working with batteries. Batteries can produce a short circuit current high enough to make metal melt, and could cause severe burns.
- **CAUTION!** Avoid touching eyes while working near batteries.
- **CAUTION!** Have plenty of fresh water and soap nearby in case battery acid contacts skin, clothing, or eyes.
- Explosive battery gasses may be present during charging. Be certain there is sufficient ventilation to release the gasses.
- **CAUTION!** NEVER smoke or allow a spark or flame in vicinity of a battery.
- Do not expose this charger controller to rain, snow or liquids of any type.
- **WARNING!** Provide ventilation to outdoors from the battery compartment. The battery enclosure should be designed to prevent accumulation and concentration of hydrogen gas at the top of the compartment.
- **CAUTION!** Use insulated tools to reduce the chance of short-circuit when installing or working with the inverter, the batteries, or other equipments attached to this unit.
- **CAUTION!** For battery installation and maintenance, read the battery manufacturer's installation and maintenance instructions prior to operating.
- Only charge Sealed Lead Acid, Vented Lead, Ni-Cd or Gel batteries.
- **CAUTION!** To reduce risk of injury, only use qualified batteries from qualified distributors or manufacturers. Any unqualified batteries may cause damage and injury. Do NOT use old or overdue batteries. Please check the battery type and date code before installation to avoid damage and injury.
- **WARNING!** It's very important for safety and efficient operation to use appropriate external battery cable. To reduce risk of injury, external cables including battery cables, PV panel cables and load connected cables should be UL certified and rated for 75° C or higher. And strongly suggest not to use copper cables less than 12AWG. Below is the external battery cable reference according to system requirements.

Model	Nominal Battery Voltage	Typical Current (Amp)
SCC-300MPPT	12 V	25 A
SCC-600MPPT	12V or 24 V (auto sensing)	25 A
SCC-850MPPT	36 V	20 A

NOTE: It's recommended to allow experienced personnel to install solar panel because the efficiency of solar energy transmission is directly affected by installation angles. Please follow the voltage requirement of the unit to wire connection with solar panel and batteries.

Terminal Installation

Step 1: Prepare flat screwdriver, and stripped wires.

Step 2: Screw assembled terminal and wire into solar charge controller. Refer to chart 2.

Mounting

Step 1: Choose mounting location

Locate the solar charge controller on a vertical surface. Select an appropriate mounting location. Use a horizontal line and the length of the line must be 150mm and mark the two ends on the wall. (see Fig. 1 & Fig. 3)

Step 2: Check the clearance

Install the solar charge controller in a protected area that is free of excessive dust and has adequate air flow. Please place the solar charge controller away from other units at least 20 cm to avoid interference. Do NOT operate it where the temperature and humidity is outside the specific limits. (Please check the specs for the limitations.)

Step 3: Drill the holes

Remove the controller and drill 2 holes in the marked locations with 2 screws.

Step 4: Secure controller

Place the unit on the surface and align the mounting holes with 2 screws in step 3. (see Fig. 2 & Fig. 4)

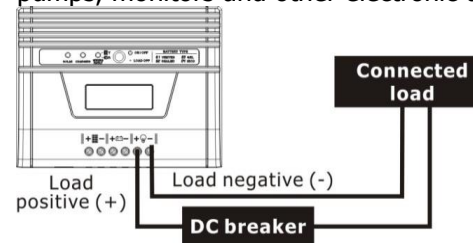

Wiring

CAUTION! Be sure to secure all wiring, especially for mobile applications. Use cable clamps to prevent cables from swaying when the vehicle is in motion. Unsecured cables create loose and resistive connections which may cause excessive heating or fire

Step 1: DC Load Wiring

The load output will provide battery voltage to connected loads such as lights, pumps, monitors and other electronic devices.

Step 1: connect load positive (+) wire to the positive terminal of the unit and load negative (-) wire to the negative terminal of the unit.

Step 2: install a DC Breaker or a DC fuse holder in a positive wire. The rating of the DC Breaker/Fuse must be according to the charging current (40 Amp). Keep the DC breaker off or do not install the DC fuse.

WARNING! Please use the appropriate cable size according to load rating. Please refer to Important Safety Warnings Section for the details. It will prevent internal high temperature.

Step 2: Battery Wiring

Step 1: connect battery positive (+) wire to the positive terminal of the unit and load negative (-) wire to the negative terminal of the unit.

Step 2: install a DC Breaker or a DC fuse holder in a positive wire. The rating of the DC Breaker/Fuse must be according to the charging current (40 Amp). Keep the DC breaker off or do not install the DC fuse.

1) Multiple batteries in series connection (Refer to Fig. 5): All batteries must be equal in voltage and amp hour capacity. The sum of their voltages must be equal to the nominal DC Voltage of the unit.

Fig. 5

2) Multiple batteries in parallel connection (Refer to Fig. 6): Each battery's voltage must be equal to the Nominal DC Voltage of the unit.

Fig. 6

Step 3: Solar Module Wiring

WARNING: Risk of electric shock! Exercise caution when handling solar wiring. The solar array high voltage output can cause severe shock or injury. Cover modules from the sun before installing solar panel wiring.

Step 1: connect positive (+) wire of solar module to the positive terminal of the unit and negative (-) wire of solar module to the negative terminal of the unit.

1) Single solar module connection (Refer to Fig. 7): When using a single solar module, its voltage must not exceed the maximum solar module open circuit voltage (see below Table 1).

Fig. 7

Table 1:

Model	Solar Module Open Circuit Voltage (max.)	Maximum Solar Module Power
SCC-300MPPT	50 VDC	300 W
SCC-600MPPT	75 VDC@ 24 V or 50 VDC@ 12 V	600 W@24V or 300 W@12V
SCC-850MPPT	98 VDC	850 W

2) Multiple solar modules in series connection (Refer to Fig. 8): All modules must be equal in voltage and amp hour capacity. The sum of their voltages must not exceed the maximum solar module open circuit voltage. And, the sum of their solar power must not exceed the maximum capacity of the unit.

Fig. 8

3) Multiple solar modules in parallel connection (Refer to Fig. 9): Each module's voltage must not exceed the maximum solar module open circuit voltage. And, the sum of their solar power must not exceed the maximum capacity of the unit.

Fig. 9

CAUTION: It may not cause any damage to solar module or unit when connecting polarity reversals. However, the unit will not be able to work normally.

WARNING! Please use the appropriate cable. Please refer to Important Safety Warnings Section for the details.

Step 4: Switch on DC breaker or install DC fuse

After completing all wires, double check if all wires are connected well. Then switch on DC breaker or install DC fuse on. Take off the cover of solar module. When the voltage of solar module is 5VDC higher than battery voltage, the charger will automatically turn on to work.

NOTE: If battery is not connected, even though solar module power is achieved, the charger is still not working.

3. Operation

After all wires are connected, the solar charge controller will automatically be activated. At this time, the blue LED will light up and LCD display panel will show information.

Switch Operation

The switch has three modes during operation:

Activate LCD backlight	Press button for less than 1 second
Select battery type* 	When the unit starts to work, press button for 1-3 seconds to select battery type. D1: vented battery D2: sealed lead acid battery D3: Gel battery D4: Ni-Cd battery D5: Custom**
Mute	Press button > 3 seconds
Power on	Press button for 1 second to turn on the unit.

*Please carefully to select battery type. It will damage battery if the setting is incorrect. Refer to charging voltage table in the appendix.

**This option is self-defined bulk/floating voltage via bundled software.

Status, LED/LCD Display and Audible Alarms

Status	LCD	LED	Alarm
Polarity reversal on solar module connection.	N/A	Yellow LED on.	N/A
Polarity reversal on battery connection.	N/A	Red LED on.	N/A
Polarity reversal on battery and solar module connection.	N/A	Orange LED on.	N/A
Battery is in charging.		Blue & Green LEDs on.	N/A.
Low battery voltage.*	 Flashing every sec.	N/A	Sounding every sec
110% overload.	 OVERLOAD! Flashing every 2 secs.	N/A	Sounding every 2 secs. for 5 min. Then continuously sounding.

*Refer to alarm point for low voltage table in appendix.

Fault and error codes table:

Status	LCD	LED	Alarm
Battery defect. There is power input from solar module, but battery voltage is too low. 12V system: < 8.5V 24V system: < 17V 36V system: < 25.5V		Green LED on.	Continuously sounding.
Overcharge and the charger will automatically cut off output.		Blue LED on	Continuously sounding.
130% overload and the charger will automatically cut off output.		N/A	Continuously sounding.
When solar input voltage is too high, the charger will automatically cut off charging.		Blue LED flashes every second	N/A

4. Specifications

Model	SCC-300MPPT	SCC-600MPPT	SCC-850MPPT
INPUT			
MPPT Range @ Operating Voltage	15 V ~ 37 V	30 V ~ 66 V	45V~88V
Maximum Solar Module Open Circuit Voltage	50 V	75 V	98 V
Maximum Solar Module Power	300 W	600 W	850 W
Maximum Current	18 A	18 A	17 A
OUTPUT			
Nominal Battery Voltage	12V	24V	36V
Connected Battery Type	Sealed lead acid, vented, Gel, Ni-Cd battery		
Maximum Charging Current	25 A	25 A	20 A
Standby Power Consumption	2 W		
Charging Method	Three stages: bulk, absorption, and floating		
PHYSICAL			
Dimension (DxWxH mm)	135 x 170 x 57.5	220 x 170 x 57.5	
Net Weight (kgs)	0.92	1.85	
ENVIRONMENT			
Humidity	0-100 % RH (non-condensing)		
Operating Temperature	-20°C - 55°C		
Storage Temperature	-40°C - 75°C		

5. Trouble Shooting

Problem	Possible Cause	Solutions
Yellow LED on	Polarity reversal on solar module connection.	Reconnect polarity again
Red LED on.	Polarity reversal on battery connection.	Reconnect polarity again.
Orange LED on.	Polarity reversal on solar module and battery connection.	Reconnect polarity of solar module and battery again.
No solar energy input during daytime.	Wires are not firmly connected.	Check if all wires are connected properly.
	Solar module defect.	Check solar modules or call local dealer to replace solar modules.
F0 fault code displays on LCD panel	Battery wires are not connected well.	Check if battery wires are properly connected.
	Battery defect.	Replace battery.
Backup time is shorter.	Battery defect.	Check battery life cycle and replace battery.
	Overload.	Remove excess loads.

Problem	Possible Cause	Solutions
F1 fault code displays on LCD panel.	Battery wires are not connected well.	Check if battery wires are properly connected.
	Battery defect.	Replace battery.
	Charge controller defect.	Replace the unit.
F2 fault code displays on LCD panel.	Overload.	Remove excess loads.
E1 fault code displays on LCD panel.	Solar input voltage is too high.	Check if solar wiring is correct. And then check solar input voltage.

If there is any abnormal situations occur which doesn't list above, please call the service people immediately for professional examine.

APPENDIX

Table 1: Recommended minimum battery cable size versus length

Model	Nominal battery Voltage	Charging Current	1 meter (one-way)	Dia-mm
SCC-300MPPT	12 V	25 A	AWG 12	2.0525
SCC-600MPPT	24 V or 12 V (auto sensing)	25 A	AWG 12	2.0525
SCC-850MPPT	36 V	20 A	AWG 12	2.0525

Table 2: External Battery Cable Size Reference

AWG (American Wire Gauge Size)	Dia-mm (Diameter in millimeters)	Ohms/Kft (Ohms per 1,000ft or 304.8 meter)
0000(4/0)	11.684	0.049
000(3/0)	10.405	0.0618
00(2/0)	9.2657	0.0779
0(1/0)	8.2513	0.0983
1	7.348	0.1239
2	6.5436	0.1563
3	5.8272	0.197
4	5.1893	0.2485
5	4.6212	0.3133
6	4.1153	0.3951
7	3.6648	0.4982
8	3.2636	0.6282
9	2.9063	0.7921
10	2.5881	0.9989
11	2.3048	1.2596
12	2.0525	1.5883

Table 3: Charging voltage for 4 types of battery

Battery Type	Battery Type Code	SCC-300MPPT		SCC-600MPPT		SCC-850MPPT	
		12V battery system		24V battery system		36V battery system	
		Bulk Voltage	Floating Voltage	Bulk Voltage	Floating Voltage	Bulk Voltage	Floating Voltage
Vented	01	14.3 V	13.2 V	28.6 V	26.4 V	39.6 V	42.9 V
Sealed	02	14.3 V	13.4 V	28.6 V	26.8 V	40.2 V	42.9 V
Gel	03	14.3 V	13.7 V	28.6 V	27.4 V	41.1 V	42.9 V
Ni-Cd	04	14.3 V	14.0 V	28.6 V	28.0 V	42.0 V	42.9 V
Custom	05	Self-defined		Self-defined		Self-defined	

Table 4: Alarm point for low battery voltage table

Model	Alarm point
SCC-300MPPT	10.5 V
SCC-600MPPT	21.0 V
SCC-850MPPT	31.5 V

Table 5: Charging hour table for reference

Battery Capacity	To 90% capacity @ 25A charging current
52 Ah	2 hours
100 Ah	4 hours
200 Ah	8 hours
300 Ah	12 hours
400 Ah	16 hours
500 Ah	20 hours

Table 6: Power consumption of home appliances table*

Appliances	Power Consumption (W)	Daily usage hours	Daily watt hours used (Wh)
Lighting bulb	60	6	360
Energy saving bulb	13	6	78
Electric fan	60	12	720
TV	100	4	400
Washing machine	800	1	800
Air conditioner	800	6	4800
Freezer	400	24	9600
PC with 17" monitor	150	6	900
Laptop	70	6	420

*This power consumption table may be different based on different consumer behavior and local electronic specifications.
